

Profits without cash.

What the filings said.

Super Micro's financial statements rebuilt from SEC filings exactly as published, and two standard manipulation screens run on every quarter since 2013. Three and a half months before the short report, the numbers already said that profit was not turning into cash.

Do the reported profits look like the ones that were later restated?

BENEISH M-SCORE · 8 INDICES (1999)

DSRI	Receivables vs sales
GMI	Gross margin decline
AQI	Asset quality
SGI	Sales growth
DEPI	Slower depreciation
SGAI	SG&A intensity
TATA	Accruals: profit minus cash
LVGI	Leverage

Above -1.78: looks like the manipulators in Beneish's sample

DECHOW F-SCORE · 7 VARIABLES (2011)

Accruals	RSST, all operating accruals
Δ Receivables	over average assets
Δ Inventory	over average assets
Soft assets	not PP&E or cash
Δ Cash sales	sales growth net of receivables
Δ ROA	change in return on assets
Issuance	raised debt or equity

Probability of misstatement over the 0.37% base rate; above 1.85 = substantial

M-score	+0.29	+0.66	-0.91
F-score	4.01	6.13	1.91

Outside the ratios: an SEC case for fiscal 2015 to 2017, three auditors in two years, late filings in five years, an adverse opinion on internal controls, open DOJ and SEC subpoenas. On the other side: no restatement, and cash turning positive.

RECOMMENDATION

The screen is a trigger for questions, not a verdict. For a lender in June 2025: covenants on operating cash flow and inventory rather than EBITDA, a borrowing base audited on receivables and inventory, reporting on related-party purchases, and a trigger on any auditor change or late filing.
